INTRODUCTION

The fifth edition of the Import Commodity Classification consolidates the many changes made since the last printing in 1972 (Fourth Edition).

This edition also shows the codes and descriptions of a number of commodity classes compiled for internal use, which can not be released except to employees of Statistics Canada. These classes are marked with the symbol # in the "date" column. In all records available to other government officers or the public, such classes are combined with the general class within the same commodity group (e.g.: class 75-59-3 is included with 75-59, class 423-99-3 with 423-99, etc.).

Section I, Live Animals, contains all live animals except live fish and other seafoods shipped for use as food, which are included in Section II.

Section II, Food, Feed, Beverages and Tobacco, contains all other commodities whose chief end use is as food, feed, beverages or tobacco. Because any commodity at one stage of processing is located in only one place in this classification, certain non-food grades of chiefly food commodities (e.g. seed wheat and seed potatoes) are classified in this section, and certain food grades of chiefly non-food commodities (e.g. edible tallow and vegetable oils) are excluded. Within this section the commodities are further classified by component material and stage of processing.

Section III, Crude Materials, Inedible, contains all commodities whose chief use is as materials for industry, and which have not been processed beyond the stage of cleaning, sorting or concentrating, together with the synthetic equivalents of some natural materials. Waste and scrap materials which are principally used for the same purpose as particular crude materials are included with those materials; other waste and scrap materials are grouped at the end of the section. Within this section the commodities are further classified by component material.

Section IV, Fabricated Materials, Inedible, contains all commodities which have passed the preliminary stages of processing but which are still used chiefly as materials in some later industrial process. Some commodities in this section are highly processed and the chief part of their value may be derived from manufacturing. But all have in common the basic characteristic of materials, i.e., they will be subjected to (or used up in) further industrial operations in the course of which their form will be changed or their identity lost. Within this section the commodities are further classified chiefly by component material.

Section V, End Products, Inedible, contains all commodities which will not lose their identity through further processing, and which are commonly regarded as articles rather than as materials, together with finished identifiable parts, attachments and accessories of these articles. Within this section the commodities are further classified chiefly by principal use or function.

The principles underlying the distinction between fabricated materials and end products can be illustrated by considering the difference between a nail and a needle. The nail is of no use by itself; it becomes useful only in connection with other materials and then it has lost its identity as a nail by being incorporated with those other materials into something quite different from any of them. The needle, on the other hand, is used with other materials but emerges from that use still a needle which is useful again for the same purpose. In this sense the nail is a fabricated material and the needle an end product.

The term "parts" as used in this classification includes only components and assemblies whose end use is quite specific. It does not include such general purpose fabricated materials as nuts, bolts, hinges and other hardware which are classified as such in Section IV unless they form a minor proportion of a mixed invoice of "parts". It also excludes such general purpose end products as motors, ball-bearings or transformers which are separately specified in various classes of Section V. Any import shipment is classified as "parts" only if it consists of a variety of commodities all intended for use in a single assembly and which can not readily be separated, or if its components are not mentioned in the classification.

Parts may be treated in any of three ways. A few divisions of the classification provide a separate group or groups to cover parts of all or most of the articles classified in other groups of the division (e.g. divisions 58 and 60). In other cases, parts of particular commodities are specified in separate classes in the same group as the commodity, or included in the "n.e.s." class of the group (e.g. 551- and 571-). In most cases, however, both articles and their parts are included in the same class, and in these cases the class description mentions parts whenever these are known to form a significant part of the class total.

The following table illustrates how particular commodities at different stages of processing are treated in Sections III-V of this classification:

<u>Crude Materials (III)</u>	<u>Fabricated Materials (IV)</u>	<u>End Products (V)</u>
rubber, natural	rubber belting, heels	rubber tires, play balls
logs	lumber, plywood, millwork	furniture, skis, matches
pulpwood	pulp, paper	books, magazines
fibres, natural or man-made	yarns, piece goods	clothing, rugs, sheets
metals in ores, metal scrap	ingots, bars, wire, hardware	machinery, automobiles

Section VI, Special Transactions - Trade, contains certain essentially commercial transactions which are not, for various reasons, classified by commodity in trade statistics; some import packing, all goods previously exported from Canada which are returned to Canada within five years after having been exported, and small value shipments. The value of these transactions is included in published totals of Canadian imports.

Section VII, Special Transactions - Non-Trade, contains certain transactions which do not have an international financial implication or which, for various reasons, are better considered separately from merchandise trade in economic analysis; e.g.: gold, settlers' effects and tourist purchases. The value of these transactions is not included in published totals of Canadian trade, but statistics are compiled because they have independent value.

Relation to Other Classifications: Every class, group and division in Sections I-V of the MCC is defined in terms of the SCC, and it is therefore possible to relate import statistics to the SCC and, through it, to other series compiled on the same basis by Statistics Canada. Sections VI and VII of the MCC are reserved for special transactions which have no exact counterpart in other series (with the partial exception of export statistics), or which, for special reasons, must be excluded from regular totals of Canadian import trade.

There is an especially close relationship between the MCC, which was introduced in 1964, and the Export Commodity Classification (XCC), introduced in 1961. Both classifications retain all the sections and almost all the divisions of the SCC, and many groups and even classes are identical in all three. Whenever the same commodity code is used in the MCC and the XCC it indicates exact comparability between import and export statistics, except in the case of "n.e.s." classes where exact comparability may require consideration of other classes within the group or sub-group to which the "n.e.s." class relates. There are also many other cases of exact comparability where, for technical reasons, the use of a common code was not feasible; these are indicated by the use of identical commodity descriptions in the two classifications (again with the qualification applying to "n.e.s." classes). The summary of the MCC which follows this introduction (pp. 7-17) can readily be compared with the corresponding summary in the XCC, Vol. I (Cat. No. 12-521, pp. 11-19), or that in the SCC, Vol. I (Cat. No. 12-502, pp. 17-32).

The "Most Common Tariff Items" column of this classification shows the tariff items under which most of the value of imports included in any class were entered at customs ports. The number of tariff items shown for any class is limited by the space available on the page. These listings are not exhaustive, nor are they limited to "correct" tariff items. Persons wishing official rulings on the tariff status of particular commodities should consult the Customs and Excise Division of the Department of National Revenue. Separate statistics on imports under particular tariff items, on a service charge basis, can be obtained by contacting the Director, External Trade Division, of Statistics Canada.

Availability of Time Series: There is no close relationship between the structure of this classification and that of the Statistical Classification - Imports which was in use prior to 1964. However many individual classes are comparable in the two classifications, and cross-references to the old classification are shown for all classes which have not been revised since January, 1964. As with tariff items, only the most common relationships are shown in the "Former Class" column of this manual.

The last two columns of each page in the body of this classification are intended primarily as aids to persons who wish to obtain past-period comparisons for the classes of the MCC. The first of these columns gives the date on which the class was established with its present content. A class with the same description (and perhaps the same code) may have existed earlier, but before the date shown its content will have been significantly different. Alternatively, the description (and perhaps the code) of the class may have changed one or more times since the date shown, but if so its content did not alter significantly when the description (or code) was changed. The research on which this column is based is still preliminary, and has not been extended before 1919. In cases where the equivalent of a present class existed before January, 1919, the date 1919 is shown in brackets.

The other "comparisons" column shows the code or codes of the classes which included substantially all of the content of a present class immediately before the present code came into use. Whenever two or more former codes appear in this column the class was established with its present coverage on the date shown in the adjoining column. Whenever a former code is starred (*), this indicates that only part of the former class is included in the new class; in these cases also the class was established with its present coverage on the date shown in the adjoining column. When a single unstarred code appears in this column it indicates that on at least one occasion the code of the class was changed without there being a significant change in the content of the class; in these cases the adjoining column shows the earlier date on which the class was established with its present coverage rather than the later date on which the present code was adopted.

Units of Quantity: In preparing this classification, a systematic effort was made to select units of quantity which could readily be reported, which could be made uniform in import and export statistics, and which would not conflict with units which must be shown on customs documents for tariff purposes. As far as possible uniform units of quantity are used in each group of the classification to facilitate mechanical methods of tabulation, and also for goods imported under any tariff item to facilitate reporting. Weight and number are the most commonly used units since one or both of these is normally available for any import or export shipment, but in some cases measures of volume, area or length are used to conform with prevailing industrial practice or the tariff. Generally, weight is the most common measure of quantity in Sections II, III and IV of the classification, number in Sections I and V. In order to minimize statistical enquiries, the weight of any shipment should be reported on customs entries in cases where neither the customs tariff nor this classification clearly indicates some other unit.

The treatment of parts, attachments and accessories in Section V affects the interpretation of units of number used in this section. Whenever finished parts, attachments and accessories of a commodity are included with the commodity in a single class, the value of the class covers the total value of all shipments of the commodity including parts, attachments and accessories, but the unit of number refers only to the number of complete units imported. For such classes the average value per unit can not be calculated.

Producers and processors of canned foods have recommended that quantity statistics for these commodities should be in terms of "net weight", i.e. that the weight of all containers, including the cans, should be omitted and only the weight of the contents of the cans shown. This classification attempts to follow that recommendation for canned meats, canned fish, canned dairy produce, canned pickles, canned maple products, canned instant coffee, canned soups and canned baby foods. It is not feasible to follow this practice for other canned foods, especially for canned fruits and vegetables, since the necessary information can not readily be extracted from customs documents.

In this connection it should be noted that throughout this classification the term "canned" means preserved solely by being shut off from contact with air. It therefore includes all foods preserved by hermetically sealed containers, whether these be made of metal, of glass or of other materials, and also food packed in plastic wrappings and preserved solely by sealing against penetration by air. It does not include frozen foods regardless of the use of hermetically sealed containers since frozen foods are preserved primarily by being frozen rather than by being shut off from contact with air. Likewise foods wrapped and sealed in plastic materials but which must be kept under refrigeration are not included as "canned".

Format: This classification is issued in loose-leaf format, punched to fit any standard 3-ring binder. As revisions are made to the classification, the relevant pages will be reprinted and may be obtained from Statistics Canada. It is expected that this practice will reduce the need for frequent reprinting of the whole classification.

ABBREVIATIONS, DEFINITIONS AND UNITS OF QUANTITY USED IN CANADIAN IMPORT STATISTICS

- Bbl. Volume in barrels (for petroleum: 35 Canadian gallons or 42 U.S. gallons).
Broad woven More than 12 inches in width.
Canned Preserved solely by being shut off from air (see also discussion on p.5 above).
Carat Weight in carats.
Cord Volume in cords.
Cwt. Weight in hundredweights of 100 lbs. each.
Cwt. N. For canned foods, weight of contents of cans in hundredweights of 100 lbs. each,
the weight of all containers and packing being excluded (see also discussion on p.5).

Doz.	Number of dozens.
Doz. Pr.) Dz. Pr.)	Number of pairs in dozens.
Ft.	Length in linear feet.
Gal.	Volume in Canadian gallons (1 U.S. gal. = 0.83 Can. gal.).
Gross	Number in gross.
Hardwood	Wood from broad-leaved trees.
Kg.	Weight in kilograms (1 Kg. = 2.2 lb.).
Lb.	Weight in pounds.
Lb. N.	For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded (see also discussion on p.5).
M.	Number in thousands.
M. B. Ft.) M. B. F.)	Volume in thousand board feet.
M. Cu. Ft.) M. C. F.)	Volume in thousand cubic feet.
M. Kw. H.	Thousand kilowatt hours.
Narrow woven ...	Not more than 12 inches in width.
N. E. S.	Not elsewhere specified.
No.	Number.
Oz.	Weight in ounces.
Pack	Number of packs.
Pair	Number of pairs.
P. Gal.	Volume of alcoholic content in terms of Canadian gallons of the strength of proof (1 U.S. P.gal. = 0.74 Can. P.gal.).
Pkg.	Number of packages.
Softwood	Wood from coniferous trees.
Sq. Ft.	Area in square feet.
Sq. Ft. 3/8" equiv.))	Volume in square feet of 3/8" thickness, other thicknesses to be converted to the equivalent of 3/8" thickness.
SF3/8)	e.g. 10,000 sq.ft. of 3/16" plywood = 5,000 sq.ft. of 3/8" equivalent.
Sq. Yd.	Area in square yards.
Ton	Weight in short tons of 2,000 lb. each: 1 long ton = 1.12 short tons or 2,240 lb. 1 metric ton = 1.1 short tons or 2,205 lb.
Tr. Oz.	Weight in troy ounces.
-	In Unit of Quantity Column: no quantity recorded.
*	Preceding class number: class or note revised in some way as of date appearing at top of page. After former class number: only part of former class included with specified present class.
#	Statistics on this class not available except to employees of Statistics Canada.

331 - Lumber is rectangular-sawn (and sometimes dressed) to standard sizes. Lumber thicknesses and widths are generally at 1" intervals from 1" up (from $\frac{3}{4}$ " up in the case of dressed lumber). Lumber lengths are often mixed, but are usually multiples of 1', and rarely less than 6'. Some typical dimensions for lumber are:

2" x 4" x 8'	1" x 6" x 10'
2" x 10" x 12'	8" x 8" x 12'

The term "hardwood" means wood from broad-leaved (deciduous) trees, the term "softwood" means wood from evergreen (coniferous) trees. The term "domestic" refers to the species of wood which grow in Canada, the term "exotic" to the species of wood which do not grow in Canada.
See MO-5-33/1, 7, 8, January 1, 1971.

Exclude sawmill products (333-), other wood fabricated materials (339-). See notes for these groups.

331 - 24 Exclude yellow poplar (331-79).

331 - 29 Include i.a. sycamore lumber.

331 - 35 Include eastern white cedar (white arborvitae), a giant arborvitae, yellow cedar (Alaska cedar, Alaska cypress, canoe cedar, Nootka cedar, yellow cypress).

331 - 48 Include California white pine, western yellow pine.
Exclude California sugar pine (331-76).

331 - 52 Exclude pitch pine, southern pine, sugar pine (331-76).

- 333 - Sawmill products are rectangular-sawn (and sometimes dressed) to specific sizes according to order, usually for a special end-use. The thickness and width of sawmill products will vary, and will often be specified to the nearest 1/8" or 1/16". The length of sawmill products will also vary, but (except for railroad ties) will usually be expressed in inches, and usually 48" or less. Some typical measurements of sawmill products are:

6" x 6" x 30"	2" x 2" x 30"
1 1/8" x 3 1/2" x 16"	1" x 1 1/2" x 60"

Exclude lumber (331-), other wood fabricated materials (339-). See notes for these other groups.

- 335-89 Include staves and headings.
Exclude K.D. Barrels (950-55).
- 336-09 Exclude cabinet doors, cupboard doors etc. (336-99).
- 336-35 Include window units of wood fitted with glass or not. Flexivent double glazed units.
Exclude insulating multi-pane air-sealed window units such as Polyverbel, Thermopane, Tindow Units (473-35), window units of metal fitted with glass or not (461-29).
- 336-59 Check quantity. To convert "square feet" into M.B. Ft., multiply the number of square feet by the thickness and divide by 1,000; e.g. 80,000 sq. ft. x 5/16" ÷ 1,000 = 25 M.B. Ft. To convert cubic feet into M.B. Ft. multiply the number of cubic feet by 12 and divide by 1,000; e.g. 2,000 cu. ft. x 12 ÷ 1,000 = 24 M.B. Ft. To convert cubic meters of sawn lumber into board feet multiply number of cubic meters by 424: one cubic meter equals 35.3 cubic feet.
Exclude wooden floor tiles (494-49).
- 336-99 Include glued-up lumber.

- 375 - 51 Include modacrylic fabrics.
- 375 - 99 Exclude glass fabrics, drapery (381-81), glass fabrics n.e.s. (381-89), paper fabrics (381-91).
- 377 - 03 to -49 Include all woven fabrics over 12" in width, made of a mixture of wool and hair with other textile fibres, in which the wool and hair content is less than 90% by weight, except elastic fabrics (377-99). This sub-group is not restricted to fabrics in which the wool and hair content predominates; even 5% wool and hair content is sufficient to place a fabric in this sub-group. The classes of this sub-group take both apparel fabrics and other fabrics.
Wool and hair mixtures should be coded as follows:
(1) when wool content of fabric is chiefly woollen, code to 377-03, -06, -08;
(2) when wool content of fabric is chiefly worsted or of equal woollen and worsted, code to 377-39;
(3) when content of fabric is chiefly hair, code to 377-49.
See also MO-5-37/2, 7, May 27, 1964.
- 377 - 06 Check goods imported under T.I. 53205-1 to ensure that fabrics are over 9 oz. and less than 12 oz. if 9 oz. or less code 377-08, if 12 oz. or more code 377-03.
- 377 - 39 Include worsted fabrics, wool mixtures.
Exclude papermakers' felts (381-76 or 474-20).

425 - This group covers basic industrial materials of plastics (other than those covered in the preceding two sub groups). They are generally further advanced than those in groups 423- and 424- , but will normally be used as materials in some later industrial process. Articles of plastics which will not lose their identity through further processing are to be classified according to rulings, etc.

425 - 24 Exclude bars, angles, channels and similar shapes which have been punched, drilled or otherwise fabricated (425-99), laminated bars, rods etc. (425-40 or 425-49), expanded blocks, slabs etc. (425-31).

425 - 40 Include only rigid and semi-rigid materials.
Exclude box toe board coated fabrics and coated or impregnated fabrics containing textile fabrics produced by any method including lamination (387-); and foam laminated fabrics (381-19).

425 - 47 Include only rigid and semi-rigid materials.
Exclude absorbent paper solid white and solid colour not printed or impregnated (352-99), printed or impregnated base stock for laminates (359-75), and laminates paper base of a flexible nature (425-49).

425 - 49 Include rigid and semi-rigid materials with a non-textile or a non-paper base and flexible plastic laminates paper base.
Exclude absorbent paper solid white and solid colour not printed or impregnated (352-99), printed or impregnated base stock for laminates (359-75).

425 - 90 Exclude masking tape and other pressure-sensitive tape in retail packages (904-99), video-tape (634-77), magnetic tape n.e.s. (634-79).

425 - 99 Include only forms of plastics not specified in classes 423-02 to 425-90 which will be used as materials in some later industrial process.
Exclude articles of plastics which will not lose their identity through further processing, e.g. aerosol valve assemblies (950-96), man-made bristles of any man-made fibre (246-89).

Exclude anti-corrosion compounds (429-99), compounds for the treatment of refined mineral oils (429-07), drilling mud compounds or additives (479-39, or by commodity if mentioned elsewhere in the classification or rulings).

429 - 66 Include textile printing ink.
Exclude carbonizing ink (429-99).

429-72 Include only compounded or mixed agents.
Exclude chemicals used as compounding agents (classify as chemicals).

429-74 Include starch preparations.
Exclude starches: food (62- or 69-), adhesive type (421-99) and chemically hardened/plastics materials n.e.s. / (423-99), dextrin and dextrin preparations (429-32).

429-79 Exclude prepared detergents in bulk or packaged form (800-68).

429-99-3 Include goods documented as "Reagent", "Certified Reagent", "Analytical Reagent" (A.R.) or by trade name / trade mark e.g. "Analar"; A.R. Also materials described as "Electronic grade" reagents or as "Primary standard" reagents.

Exclude diagnostic reagents, hospital (881-99).

429-99-4 Exclude rennet (144-35); papain, crude or dried (214-99); papain, medicinal (879-93); enzymes, medicinal (871-99).

<u>BARS AND RODS, STEEL -</u>						
Definition: Bars are finished steel sections, rolled or drawn, of various shapes, with dimensions of width and thickness but not of depth. They are eight inches or less in width and over 0.2030 inches in thickness. Rods is a term usually used to describe small bars for the manufacture of wire. Steel described as "bars, 3/16 inch in thickness" is not bars and should be coded as strip, even if imported under T.I. 37900-1. Verify dimensions on all entries of steel bars. <u>Bar size structural shapes</u> (angles, channels, etc.) imported under T.I. 37900-1 should be coded to class 446-30.

Alloy steel means any steel containing any one or more of the following elements in the following amounts: manganese, 1.65% or more; silicon, 0.50% or more; copper, 0.60% or more; aluminum, chromium, cobalt, columbium, molybdenum, nickel, titanium, tungsten, vanadium, zirconium, in any significant amounts. Carbon and alloy steel may be distinguished by the following specification numbers or type designations:

Carbon Steel A.I.S.I. or S.A.E. Nos. 1000 to 1329
Stainless Steel Type 201 to 546
Other alloy steel ... A.I.S.I. or S.A.E. Nos. 1330 to 9850

WIDTH AND THICKNESS DEFINITIONS FOR STEEL BARS, PLATES, SHEET AND STRIP

Note: The higher the gauge number the thinner the steel. Gauge #7 or higher is always sheet or strip. For lower gauge numbers the classification depends on width as well as thickness.

	Width	Thickness		
		Decimals	Fractions	Gauge
Bars	8" or less	over 0.2030"	13/64" and over	#5 or lower
Plate	over 8" not over 48"	over 0.2299"	15/64" and over	lower than #4
	over 48"	over 0.1799"	3/16" and over	lower than #7
Sheet and strip	8" or less	0.2030" & less	3/16" and less	#6 or higher
	over 8" not over 48"	0.2299" & less	7/32" and less	#4 or higher
	over 48"	0.1799" & less	11/64" and less	#7 or higher

444 - 06 Flat bars are 13/64" or over in thickness with a maximum width of 8".
Exclude square bars, carbon steel, hot rolled (444-09).

444 - 27 Flat bars are 13/64" or over in thickness with a maximum width of 8".
Exclude square bars, alloy steel, hot rolled (444-29).

445 - 02 - 445 - 19 Generally, any steel plate imported under tariff items not specified against these classes should nevertheless be coded to one of these classes, except for carbon steel clad with stainless steel (445-20) and saw steel (445-22). Not everything described as "plates" is plate within our meaning of the term, e.g.

- steel sheets 48" wide and 3/16" thick are often described as "plate", especially on overseas invoices. These should never be coded to classes 445-02 to -19.
- tunnel liner plates are knocked down culvert sections (448-89).
- pulp mill refiner plates are parts of machines (525-15).

445 - 08 Include all steel described as "floor plate", regardless of thickness (unless fabricated: 445-19).

- 445 - 20 Stainless clad material may be described on invoices as follows:- "3-ply" or "tri-ply" (usually with a stainless type No. reference); "20% nominal stainless clad" or "20% nom." (sometimes with a type No. reference; the percentage varies but is usually 10%, 15% or 20%); "colclad" (T.N.); "stainless clad double armor".
Exclude material clad with nickel, monel metal or other metals (445-19 or 445-51 to -62 as appropriate).
- 445 - 22 Saw steel is often imported under T.I. 44205-1. Such steel should nevertheless be coded to class 445-22.
- 445 - 31 to - 95 Generally, any steel sheet and strip imported under tariff items not specified against these classes should nevertheless be coded to one of these classes except for sheet piling (446-90), saw steel (445-22), and carbon steel clad with stainless steel (445-20).
- 445 - 33, - 37 Steel sheet described as "wasters" or "seconds" with no width dimension stated on the invoice should be coded 445-33 if hot rolled, 445-37 if cold rolled.
- 445 - 42 Invoices normally describe this steel as "enamelling iron" or "porcelain enamelling".
- 445 - 55 Include all galvanized sheet and strip, whether covered or coated with asbestos or other material, except when corrugated (445-99).
- 445 - 62 Sheet and strip of stainless or other alloy steel coated with metal should be coded to classes 445-80 to -95 even if imported under T.I. 38208-1. Sheet and strip clad with stainless steel should be coded to class 445-20.
- 445 - 63 Exclude sheet and strip which has been galvanized before being coated with other material (445-55), sheet and strip coated and corrugated (445-99).

Thickness Definitions for Stainless Steel Sheet and Strip

<u>Classes</u>	<u>Decimals</u>	<u>Fractions</u>	<u>Gauge</u>
445-80 and 445-86	.046" and less	under 1/20"	#19 or higher
445-81 and 445-87	.047" and more	1/20" and more	#18 or lower

445 - 92 Silicon steel is often described on invoices as "electrical grade".

- * 445 - 99 Include all corrugated sheet and strip, whether or not galvanized or otherwise coated, except when imported as part of a prefabricated building, etc. (941-29 or -49).
- 446 - Structural shapes are finished steel sections, of various shapes, with dimensions of width, thickness and depth. All structural shapes which have been punched, drilled or otherwise fabricated are included in class 446-80 regardless of type of steel. All unfabricated structurals of stainless or other alloy steel are included in class 446-50. Only unfabricated carbon steel structurals are included in the other classes of this group.
- 446 - 05 Include carbon steel beams described as "bearing pile", "CBP", "BP", "BP piling", and other wide flange sections of equal width and depth having a weight per foot as indicated below -
- | <u>AI SI Section Index</u> | <u>Depth or Web</u> | <u>Weight per Foot</u> |
|----------------------------|---------------------|------------------------|
| CBP 83 | 8" | 36 |
| CBP 103 | 10" | 42, 57 |
| CBP 124 | 12" | 53, 74 |
| CBP 145 | 14" | 73, 89, 102, 117 |
- 446 - 07) Exclude bearing pile (446-05). Wide flange beams may be identified as broad flange beams, H-beams
) or JR beams, or by producers' codes such as U.S. Steel codes "CB", "CBJ", "CBL" and "CBS"
) or Bethlehem Steel codes "B", "BJ" and "BS".
- 446 - 10)
- 446 - 15 & - 20 Include the following items if unfabricated carbon steel.
- | | <u>Special sections</u> | <u>TEES</u> |
|---------|-------------------------|-------------|
| I-Beams | <u>Standard shapes</u> | <u>ZEEs</u> |
- 446 - 15 Include carbon steel structural shapes with the largest leg or web over 6 inches in width or depth, except for bearing pile (446-05), wide flange beams (446-07 or -10), angles (446-13), fabricated shapes (446-80), and channels (446-11).
- 446 - 20 Include carbon steel structural shapes with the largest leg or web at least 3 inches but not over 6 inches in width or depth, except for bearing pile (446-05), wide flange beams (446-07 or -10), angles (446-18), and channels (446-16).

449 - 05 Include galvanized barbed wire.

449 - 12 to - 45 These classes cover "single" wire in the form of a thread or slender rod. Wire may be flat etc., although the most common form is cylindrical. Class 449-12 includes both coated and uncoated wire.

449 - 29 Exclude insulated electrical wire and cable (469-75). Note that plastic coated wire is not necessarily insulated.

449 - 49 Wire strand by itself is not a wire rope. Wire strand consists of wires, all of the same diameter, twisted helically around a single wire of the same size. A wire strand may show the specifications "1 x 19" which means there are 18 outer wires around one wire.

449 - 79, - 89 Wire rope consists of a number of wire strands twisted helically together usually around a fibre or steel wire core. Wire rope described as 6 x 19 is made up of 6 wire strands, each wire strand having 19 wires.

456 - All classes of this group include alloys.

457 - All classes of this group include alloys.

457 - 30 Exclude zinc foil (457-49).

459 - The classes of this group include all forms of the specified metal and fabricated materials n.e.s. made from that metal, i.e., if some form or material of copper would go in classes 452-04 to -23 or 452-99, then the same form or material of magnesium would go in class 459-45.

459 - 45 Exclude materials described on documents as "magnesium AZ 31", "Magnesium AZ 63", "Magnesium TA 54", etc. These are magnesium alloys (459-85).

459 - 70 Exclude materials described on documents as "Ti 6 AL 4V" "Ti 5 AL 2.5 SN" etc. These are titanium alloys (459-99).

493 - 29 Include rubber clad hose and rubber lined hose.
Exclude fire hose (493-16), oil and gasoline hose (493-39), rigid pipe and tubing (hard rubber: 325-46), wire braided rubber hose (493-23).

494 - Exclude ceramic (472-33 or -35), concrete (475-99), glass (473-21), glass mosaic tiles (473-99), metal (461-50 or -99), stone (471-49) and hardwood flooring (336-59), softwood flooring (331-59), wood wall panelling (338-).

494 - 35 Exclude vinyl-asbestos floor and wall tiles (494-44).

494 - 44 to -87 Proper identification of these products is essential. Do not be misled by Customs Tariff reading under T.I. 57305-1. Note that this reading covers not only linoleum but other types of floor covering material as well.

494 - 44 Exclude solid vinyl floor and wall tile (494-35). Check invoices to ensure that vinyl-asbestos tile is not described as vinyl tile.

494 - 49 Exclude rubber flooring slab stock (325-99), plastic flooring slab stock (425-99), and solid vinyl floor and wall tile (494-35).

* 494 - 63 Exclude vinyl surface felt base wall covering (494-85), and vinyl floor covering, cushioned (494-65).

* 494 - 69 Include plastic flooring whether it is wholly of plastic or with fabric or felt base (except vinyl surface felt base floor covering: 494-63; and vinyl floor covering, cushioned: 494-65).

* 494 - 87 Include i.a. desk top linoleum.
Exclude linoleum floor and wall tiles (494-49); linoleum rugs, mats and runners (844-99); plastic floor covering, (494-63, -65, -69); plastic wall covering (494-59, -88).

494 - 88 Include inside and outside corners and parts.

- 495 - 16 Include i.a. anchor rods, cross arm bolts and braces, drive hooks, ground rods, guy clamps, guy hooks, guy shims, pole steps, steel insulator pins, wood top insulator pins.
Exclude i.a. current carrying wires (by material), eye bolts (465-99 except mixed invoices of pole line hardware), lag bolts (465-06 except mixed invoices of pole line hardware).
- 495 - 42 Exclude underfloor ducts (495-99).

- 495 - 65 Include connectors for outlet boxes only.
Exclude connectors such as battery connectors (693-95), conduit connectors (495-44), electronic communication connectors (639-), telephone equipment connectors (634-19), etc.

- 496 - 15 Include animal bristles only when processed. If not clear whether bristles are "processed" further than merely cleaned or cut to length, use class 205-49.

- 496 - 44 Include wiping cloths.
Exclude dusting cloths (849-99).
- 496 - 52 Include i.a. gaskets made up of two or more materials.
Exclude only asbestos gaskets (474-24), rubber gaskets (325-36).

- 497 - 04 Do not code from customs entries

- 501 - Exclude marine-type boilers (592-99), boilers for heating systems (651-29, -99).
- 501 - 49 Include i.a. boiler tubes if bent or otherwise fabricated.
Exclude pipes and tubes not bent or otherwise fabricated for making boiler tubes (448-).
- 502- Exclude electric motors (503-66 to -69) tractor engines (551-85), locomotive engines (571-57), automobile and truck engines (588-), marine engines (592-), aircraft engines (603-) and parts of such engines. See MO-5-50/2 August 1, 1970.
- 502-23) Exclude motorcycle and powercycle engines (588-19), and snowmobile engines and snowmobile engine parts (588-).
- 502-25)
- 502 - 40 Exclude gas turbines (compressor power units) for starting aircraft (730-69).
- 502 - 69 Exclude air turbines for starting aircraft (ground power units: 730-69); air turbines n.e.s. (502-99).
- 502 - 99 Exclude deep well turbine pumps (508-50); steam turbines (502-09).
- 503- Exclude auxiliary equipment for internal combustion engines (689-).
- 503-09 Include only generators for producing electric current.
Exclude direct current generators (503-69-5), direct current motors (503-69-4), generators for internal combustion engines (689-16) and ground power units for aircraft (730-69).
- 503-13 Exclude steam turbines and parts (502-09), gas turbines and parts (502-40), rotors and stators (503-19-3) and other generator parts (503-19).
- 503-15 These sets usually consist of a diesel engine (or other power unit) and a generator. They may be described as auxiliary power units.
Exclude gasoline or diesel type engines imported separately (502-), generators imported separately (503-09 or 503-69-5) and electric converters (electric motor driven generators 688-79).
- 503-66) Include motors imported as replacement parts of machines, etc., motors imported as parts for the productions of machines. Gear-reduced electric motors (503-69) and direct current to) generators (503-69-5).
- 503-69) Exclude motors incorporated in machines, etc., or incorporated in complex assembled parts of machines, etc. (classify as parts of machine concerned), starter motors for internal combustion engines (689-08), motor-generator sets except lighting outfits (688-79).
See MO-5-50/3-69. January 1, 1971.
- 503-79 Exclude carbon brushes (477-20), capacitors (684-81), motor starters (688-59).

504 - Exclude engine bearings of the shell (insert) type that are crankshaft main bearings, connecting rod bearings, and camshaft bearings. (Classify to that engine group or commodity class with which the engines are generally associated).

504 - 01 Include bearings only if clearly specified as automotive bearings or if imported under T.I. 43806-1 to 43877-1 or under any part of T.I. 950xx-x.

504 - 37 Include cylindrical cartridges, flange cartridges, pillow blocks and take-up units.

504 - 40 Exclude gear motors electric (503-69) and gear motors non electric (504-99).

504 - 44 Include power transmission gears i.e. bevel gears, cog wheel gears, conical gears, differential gears, friction gears, gear boxes other than speed reducers, gearing except motor vehicle, helical gears, rack and pinion gears, plastic gears and worm gears. These may also be described as wheels.
Exclude marine drive gearing (593-39).

504 - 69 Include V-belt drives.

504 - 81 Exclude flexible shaft couplings (504-99).

504 - 81 to 99 Include power transmission equipment imported as such and not forming part of or incorporated in a machine or vehicle (except, motive power transmission equipment eg. drive train, code to vehicle class concerned) at the time of importation, even if stated to be part of a specific machine or vehicle.
Exclude power transmission equipment built-in or incorporated in a specific machine or vehicle entered on the same entry, even though dutiable under a different tariff item than the machine or vehicle (classify with the machine or vehicle concerned); gear-reduced electric motors (503-69); marine drive gearing (593-39); transmissions, automotive (589-99).

) Exclude coin collections (946-40).
990 - 65)
- 992 - Statistics for this group are based on a sample of the declarations filed with Customs by Canadian tourists returning from trips outside Canada which lasted 48 hours or more. The sample size ranges from about 3% of declarations in peak travel months to 10% in the off-season. For any month the class totals and estimates of total purchases in the United States are expected to be subject to a sampling error of the order of 10%. Estimates of total monthly purchases in other countries are subject to sampling errors ranging upwards from about 20% and averaging about 1/3 for most significant countries. Estimates for purchases of particular commodities from particular countries in any month are subject to even greater margins of error. Annual estimates will have smaller margins of error than monthly figures.
